Special Issue 3, 2014

Provisional Landsat 8 Surface Reflectance Data Available

Provisional Landsat 8 Operational Land Imager (OLI) Surface Reflectance (SR) data products are now available through the Earth Resources Observation and Science (EROS) Center Science Processing Architecture (ESPA) On Demand Interface (<http://espa.cr.usgs.gov/>) and EarthExplorer (EE) (<http://earthexplorer.usgs.gov>)*.

As currently produced for Landsat 4–5 and Landsat 7 scenes, top-of-atmosphere (TOA) reflectance, Surface Reflectance (SR), and SR-based spectral indices data products are available for Landsat 8 scenes through the ESPA interface. **Please Note:** currently, only Landsat 8 scenes acquired from April 11, 2013 (DOY 101) through December 18, 2014 (DOY 352) can be processed to Surface Reflectance, due to the recent change of the Thermal Infrared Sensor (TIRS) acquired data. Please see the December 22, 2014 Landsat Mission Headlines for more details:http://landsat.usgs.gov/mission_headlines2014.php.

*The Surface Reflectance (SR) data product is the only option available using EarthExplorer (EE) under the Landsat CDR Data Sets. Orders submitted from EE are sent to the ESPA On-Demand interface for processing and data delivery.

It is important to note that Landsat 8 scenes will not be processed with the same algorithm used for Landsat 4, 5, and 7 scenes. A new algorithm (L8SR) has been developed to take advantage of Landsat 8's unique characteristics.

The L8SR algorithm uses the scene center for the sun angle calculation and then hard-codes the view zenith angle to 0. The solar zenith and view zenith angles are used for calculations as part of the atmospheric correction. In the future, the surface reflectance algorithms may be modified for Landsats 4, 5, 7, and 8 to calculate sun angles on a per-pixel basis.

The tables below provide information about the L8SR algorithm and the Provisional Landsat 8 Surface Reflectance products. **Users are encouraged to review this documentation and the Provisional Landsat 8 Surface Reflectance Product Guide** (http://landsat.usgs.gov/documents/provisional_l8sr_product_guide.pdf)

Questions and feedback about Landsat 8 Surface Reflectance data products can be sent using <http://landsat.usgs.gov/contactus.php?topic=UCE> or by contacting USGS Customer Services at custserv@usgs.gov.

Landsat 8 SR algorithm compared to the existing LEDAPS algorithm (for Landsat 4–5 and 7)

Parameter	Landsat 4–5, 7 (LEDAPS)	Landsat 8 OLI (L8SR)
(Original) research grant	NASA GSFC, MEaSUREs (Masek)	NASA GSFC
Global coverage	Yes	Yes
TOA	Visible (1–5,7) + Brightness temp (6) bands	Visible (1–7) + Thermal (10–11) bands
SR	Visible (1–5,7) bands	Visible (1–7) bands
